

Iterative design - A boat that floats

Once you have built one of your iterations for your boat, you will need to test it in water to see if it floats.

Fill in the following each time you test one of your design iterations.

Did the boat float? YES NO

If you answered yes:

How long did it float for? _____

Are there any ways you could change the design to make it float longer?

If you answered no:

What was the main reason why?

How can you change the design to remove this problem?
